

ACKNOWLEDGMENTS

This project was funded by the Great Barrier Reef Marine Park Authority in collaboration with the Queensland Department of Environment and Heritage (now referred to as the Queensland Parks and Wildlife Service). The latter provided support for the field trips. We need to especially thank Lady Musgrave Cruises and MV 1770 for their support, without which it would have been impossible to conduct the study. Both tourist operators transported interviewers and gear, and allowed interviews to be conducted during the return trips. Lady Musgrave Cruises also transported all of our camping gear. Their staff were always very friendly and helpful.

From the Queensland Department of Environment and Heritage (QDEH) (Rockhampton and Gladstone) we would like to especially acknowledge Peter Slaughter and Alison Heagney who were responsible for preparing the gear and setting up our camping site and zodiacs. This help, in addition to QDEH staff knowledge of the tour operators and cars for transporting interviewers to and from boat departure places was invaluable for the smooth running of the data collection. Many others from QDEH also gave support to the research group whilst in the field. The QDEH office in Bundaberg was our city base and Robert Johnson was always very helpful.

We attempted to involve as many staff from the management agencies as possible in this research project. The idea was to give them an opportunity to talk to the user groups of the Great Barrier Reef Marine Park and to increase their awareness of the processes of social sciences research. Volunteers from the Great Barrier Reef Aquarium (now referred to as Reef HQ) were also employed as interviewers for this project. We would like to extend our thanks for all of the interviewers' work, their willingness to cooperate and live in a group situation; particularly when they interviewed passengers under rough weather conditions and helped us to load and unload camping gear and supplies.

The following people were interviewers and/or helped us with the field trips: David Briggs (GBRMPA), Dianne Brown, Clive Cook (GBRMPA), Brian Dare (GBRMPA), Ian Dight (JCU), Vin Illin (GBRMPA), Margaret Gooch (QDEH/Townsville), Elaine Eager (GBRMPA), Andrew Elliott (GBRMPA photographer), Terry Harper (QDEH/Brisbane who came to Bundaberg with a QDEH car which was much appreciated), Aileen Hennel (GBRMPA), Mark Johnson (photographer), Michael Lusi (GBRMPA), Alan McManus (GBRMPA), Mike McNeill (GBR Aquarium), David Paton (QDEH/Gladstone), Jacquie O'Keeffe (GBR Aquarium, who also took responsibility for coordinating part of the daytrip data collection), Paul O'Neill (QDEH/Rockhampton), Sharon Pretty (GBRMPA), Shirley Richards (GBR Aquarium), Steve Russell (GBRMPA), Sue Smithson (JCU), Marina Uilrich (GBR Aquarium), Lynn Wallace (JCU) and Florence Yates (GBR Aquarium).

Our land-base accommodation was at Turtle Sands Caravan Park and the proprietor was very hospitable. The coding of the interviews was done by Liz Bragg and Amanda Young. They read through pages and pages of manuscripts diligently and provided much intellectual input to development and reframing of the categorical scheme. Their perseverance and unfailing positive attitude to a very demanding task was much appreciated. Denese Reeves was the only person who listened to all of the interview tapes. She did an excellent job with transcribing them to paper from the 'real' context.

Assistance with data handling and input was in addition given by Jackie Wolstenholme, Elizabeth Chivers, Marion Watson, Dominique Benzaken, Fernando Ponti and Bob Ponds. In addition, Dominique Benzaken, Christine Dalliston and Beryl Dennis also contributed to report layout and editing. For all their help we are extremely grateful.

The late Richard Schreyer contributed to early stages of research design and, together with Peter Valentine, Peter Slaughter and Lea Scherl, conducted pilot interviews.
