
TABLE OF CONTENTS

Executive Summary	iii
1 Recovery of the coral community at Green Island	1
1.1 Introduction	1
1.2 Methods	1
1.3 Results	2
1.3.1 Coral cover in 1985	2
1.3.2 Size frequency distribution	4
1.3.3 Hard versus soft corals	11
1.3.4 Changes in the coral community over 1 year	11
1.4 Discussion	12
2 Recruitment and dispersal of scleractinian corals at Green, Michaelmas and Upolu Reefs	15
2.1 Introduction	15
2.2 Methods	15
2.3 Results	17
2.4 Discussion	19
2.4.1 Recruitment patterns	19
2.4.2 Dispersal pathways	20
3 Population dynamics of juvenile corals at Green Island	22
3.1 Introduction	22
3.2 Methods	22
3.3 Results	23
3.3.1 Fission and fusion rates	23
3.3.2 Abundance of juveniles	23
3.3.3 Recruitment 1985-86	25
3.3.4 Mortality	26
3.3.5 Net changes	27
3.3.6 Growth rates	27
3.4 Discussion	28
4 Acknowledgments	31
5 Appendix	31
6 References	33

FIGURES

1 Line transect survey sites	2
2 Illustrations of sites around Green Island	5-9
3 Size frequency distributions from line transect data	10
4 Taxa of large and small corals	11
5 Relationship between cover of hard and soft coral	12
6 Locations of reefs used in larval recruitment study	16
7 Attachment of settlement plates showing the 'gap' habitat	16
8 Summary of spat settlement	18
9 Interaction in ANOVA of juvenile abundances	25

TABLES

1	Summary of line transect data in 1985-86	3
2	ANOVA of spat abundances	17
3	Wind speed and direction at Fitzroy Island	20
4	Abundance of families and genera of juvenile corals	24
5	Results of ANOVA of density of coral juveniles	24
6	Results of ANOVA of recruitment rate of juveniles	25
7	Abundance of juvenile recruits by family	26
8	Mortality rates of juvenile corals	26
9	Net changes in number of colonies	27
10	Growth rate of coral juveniles	28
