

ACKNOWLEDGEMENTS

A considerable number of people helped in large and small ways to make this effort possible. It would be difficult to acknowledge them all. We especially thank the captains and crews of the R.V. Lady Basten for their unflagging enthusiasm, assistance, pin point navigation and *ad hoc* engineering in the field. Claudia Baldwin and Jon Brodie of the Great Barrier Reef Marine Park Authority provided continuous support for this work. John Wellington, Neil Johnson and Lynn Swann ran the dissolved nutrient samples. Tenshi Ayukai, Peter Liston, Pornsook Chongprasith and a number of volunteers helped in the field and laboratory. Helen Sturmey, John Reghenzani and staff from the Queensland Department of Primary Industries South Johnson Field station collected river nutrient samples in good weather and (better) bad. The cooperation of the Queensland Department of Primary Industries and Bureau of Sugar Experiment Stations is gratefully acknowledged. George McNaughton and Ian Ashworth constructed the sediment traps. Ray MacAllister and John Soles helped with setting up the TDRs, their moorings and sediment trap moorings. Steve Clarke drew the maps. Sue Smith and Liz Gowlett typed, paginated and proofread various drafts. Funding from the South Pacific Regional Environment Programme (SPREP) assisted the preparation of this report.

This report is dedicated to the late John Wellington. We shall miss him.

This is AIMS contribution 628.
