

## CONTENTS

SUMMARY .....	1
INTRODUCTION .....	3
METHODS .....	5
Fish traps - design, equipment and procedure.....	5
Sampling.....	7
Analysis .....	11
RESULTS .....	14
Catch composition.....	14
Catch variability .....	23
Sample size and precision of variability estimates .....	24
Power tests.....	36
Effect of stratification .....	42
Drop-lines vs traps .....	42
DISCUSSION.....	46
Catch variability and sampling power.....	46
Power analysis .....	47
Relevance of results for the Effects of Fishing experiment .....	48
Why use traps at all? .....	49
ACKNOWLEDGMENTS.....	51
REFERENCES.....	52
TABLES	
1. Summary of total catches at Rib Reef and Davies Reef .....	11
2. Summary of within-reef ANOVAs testing for differences in catch rates between habitats and among days .....	21
3. Summary of drop-line catch data from Davies Reef.....	21
4. a. Means of catch rates by habitat and taxon on Rib Reef .....	23
b. Means of catch rates by habitat and taxon on Davies Reef.....	23
5. Coefficients of variation of catch rates by reef, habitat and taxon .....	24
6. Results from regression analyses relating daily sample means and SDs.....	24
7. Minimum sample sizes required to detect 20%, 50% and 75% decreases in catch rates for each species at Rib Reef .....	41
8. Minimum sample sizes required to detect 20%, 50% and 75% decreases in catch rates for each species at Davies Reef.....	43
9. Minimum sample sizes required to detect 20%, 50% and 75% decreases in catch rates for each species .....	44

## FIGURES

1.	1.1	Modified 'O' trap design.....	6
	1.2	Side profile of the modified 'O' trap showing the two incurved funnel entrances and the relative position of the bait canister between the funnel entrances.....	6
2.		Map of central section of the Great Barrier Reef showing the relative location of Rib and Davies Reefs .....	8
3.		Echo-sounding traces recorded on one occasion of deployment of traps with each habitat/reef combination.....	8
4.		Line drawing of an anchored drop-line with detachable branch lines .....	10
5.	a.	Mean catch rate per day for each habitat sampled at Rib Reef .....	15
	b.	Mean catch rate per day for each habitat sampled at Davies Reef .....	16
6.		Frequency distributions of catch rates per trap .....	17
7.		Size-frequency distributions for catches of <i>Lethrinus miniatus</i> in traps and on drop-lines at Davies Reef .....	22
8.		Variation in SD and CV as a function of the number of sets.....	25
9.		Variation in the CV as a function of the number of sets.....	37
10.		Minimum number of traps required to detect a nominated percentage change in the sample mean for observed sample CVs .....	45
